Firewall Drinking Water Dispenser

Manufacturer
innowave

was inoculated with high concentrations of
Pseudomonas aeruginosa
and
Legionella pneumophila
bacteria

and inspected between Dec. 2009 and Jan. 2010.

The tests performed have shown that the firewall
technology is capable of reducing
bacterial contamination

by **99.999%**

(a five log decline)

Even after long periods of stagnation the
technology produces excellent reduction ratios,
even of resistant species of bacteria.

Date: 12 April 2010
